**Write python code to verify user\_name = "Micheal" and password ="e3\$WT89x".  
The total number of attempts are 03. For every wrong user\_name and password  
Print - Invalid username or Password, upon three attempts fails print- Account  
locked**

**If inputs are correct Print - You have successfully login**

### **CODE**

```
count = 0
while count < 3:
    user_name = input('Enter user_name: \n')
    password = input('Enter password:\n ')
    if user_name == 'Micheal' and password == 'e3$WT89x':
        print('You have successfully login\n')
        break
    else:
        print('Invalid user_name or password\n')
        count += 1
if count == 3:
    print('Your account is locked\n ')
```

# OUTPUT

Enter user\_name: veena

veena

Enter password: v33678

v33678

Invalid user\_name or password.

Enter user\_name: raj

raj

Enter password: 46985gh

46985gh

Invalid user\_name or password.

Enter user\_name: virat

virat

Enter password: r6t8ee

r6t8ee

Invalid user\_name or password.

Your account has been locked
